SUMMARY

Computer Science student with two internship terms of secure processor verification experience at an Air Force research lab, complemented by full-stack mobile development and software engineering coursework and projects. My work spans hardware security testing, cross-platform mobile applications, and cloud-integrated systems. I am seeking roles in cybersecurity, secure systems engineering, and software development.

EDUCATION

Farmingdale State College, School of Engineering Technology, SUNY

Bachelor of Science in Computer Science

Expected Fall 2026

Cumulative GPA: 3.71/4.00 | **Dean's List:** Fall 2023 – Present

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Software Engineering, Computer Architecture & Organization, Data Management

TECHNICAL SKILLS

Languages: Java, Python, C/C++, Assembly, MIPS Assembly, SQL, TypeScript

Frameworks & Technologies: React Native, Expo Router, RESTful APIs, HTTPS, JSON, Google Cloud Firestore

Hardware & EDA: FPGA Programming, Cadence Xcelium, Cadence Virtuoso ViVa

Tools & OS: Git/GitHub/GitLab, Linux, Visual Studio Code, Vim, Azure Data Studio, IntelliJ IDEA, NetBeans, Claude

PROFESSIONAL EXPERIENCE

Air Force Research Laboratory (AFRL), RI Intern | Rome, NY

June 2025 – August 2025; June 2026 - Present

- Developed and debugged assembly-level regression test applications across two internship terms to verify secure core architecture components and security features of a custom processor
- Traced hardware execution using Cadence Xcelium/Viva to diagnose test failures and validate processor behavior against design specifications
- Identified and resolved structural issues in regression test infrastructure and verification methodology
- Collaborated with hardware design engineers to validate security-feature fixes through waveform analysis

Undergraduate Researcher (SURI) – Farmingdale State College | Farmingdale, NY

June 2024 – August 2024

- Project:** *Enhancing Cybersecurity with AI: Techniques, Applications, and Challenges* (Mentor: Tarik Altaib)
- Conducted research on AI-driven cybersecurity, using machine learning and NLP to analyze large datasets and detect anomalies in network traffic
- Explored ethical implications of AI in security, focusing on algorithmic bias, data privacy, and fairness
- Presented findings at the SURI and IGNITE Symposia and earned a Microcredential in Research for excellence in research and formal presentation

PROJECT EXPERIENCE

UrduSeekho

2026 – Present

- Built a cross-platform mobile app that teaches users to read Urdu script through interactive lessons, developed with React Native and Expo (SDK 56) and written entirely in TypeScript
- Implemented the SM-2 spaced-repetition algorithm to schedule reviews from per-item performance, deriving quality scores automatically from answer correctness rather than user self-assessment
- Built a custom audio pipeline serving the developer's own voice recordings, batch-recorded in one take and auto-segmented into per-item clips via a Python (pydub) silence-splitting script
- Designed an audio-resolution layer backed by Supabase storage, with an automatic Web Speech API text-to-speech fallback for any item without a recording

Truck Logistics Management System

September 2025 - December 2025

Farmingdale State College | CSC 325 – Software Engineering

- Led a 4-person development team, coordinating task delegation, GitHub workflow, and integration testing to deliver the project on schedule
- Designed and developed a JavaFX-based desktop application for fleet, driver, shipment, and maintenance management
- Implemented a layered MVC architecture separating UI, business logic, and data access
- Integrated Google Cloud Firestore for cloud-based data storage with real-time synchronization
- Built full CRUD functionality using structured JSON-based data models and client-server-style data access

Lazy Chef – RAM Hacks Hackathon

April 2025

- Developed a mobile app in 48 hours that generates recipes from limited kitchen ingredients using AI and APIs
- Integrated Google Vision API to identify ingredients from photos, using an AI filter to remove background clutter
- Used Spoonacular API to deliver step-by-step recipes, with functionality to add or remove ingredients to adjust suggestions dynamically
